English Second Language – Term 3

Project Instructions

Get ready for an exciting adventure learning about the human body! This project will take you through many different websites and informational texts. You will need to use your computer & research skills that you have learned in 5th grade to navigate and complete successfully.

TASK

You have now entered the training program to become an "expert" in body systems. You will be expected to research a specific body system with your group and present your findings to your classmates. During your presentation you will need to create a poster, model, Power Point, skit, or another teacher approved creative project. You will be completing a "Human Body" booklet as you learn about each body system. You will gather this information by using WebQuest and group discussions with classmates.

Steps to finishing your project

1. First you will be assigned to an expert team of 3-4 students.
2. Once you have your body system to research, you will be given a body system booklet to complete on your system.
3. You will work with your team to find information, functions and the location of all organs that belong to your system.
4. You will use WebQuest, magazines, and various books to collect your information. (A material list can be found on the links below).
5. After your information is collected and organized, you will need to create a poster, Power Point, skit, etc, to present to your classmates.
6. You will be assessed on the location and function of the organs in the 8 body systems. You will also need to organize a healthy living plan to take care of a certain body system for yourself or a friend of your age.
